

Gulf Ethanol Dispels Doubts

HOUSTON, Sep 4, 2008 (GlobeNewswire via COMTEX) -- Gulf Ethanol Corporation (Pink Sheets:GFET) surprised its critics today by offering a free sample of the microscopic cellulosic feedstock powder produced by its processing unit. Short sellers have engaged in criticism of GFET and its technology, questioning the reality of Gulf's ability to produce a fine cellulosic powder that enhances the productivity and viability of cellulosic ethanol production.

As of today, any individual who writes to the company at its address below may request a sample of Gulf's cellulosic preprocessed powder to examine for themselves. Be sure to include your return address when requesting a sample of the product.

"Skeptics and short sellers have been implying that our technology is not real or that it doesn't produce the fine cellulosic powder as we have announced," noted Bill Carmichael, GFET's President. "We have tried to keep investors apprised of our progress each step of the way. Now, we are going to eliminate the doubts of any honest investor by giving them an actual sample of the powder we have produced," concluded Mr. Carmichael. "If you want to know whether we can produce the cellulosic powder we have described, just ask for a sample," added Mr. Carmichael.
